

## We've heard enough, let's listen Uniek Audio, re(de)signed audio

**Uniek Audio is a 'Dutch Design' loudspeaker set that lets you enjoy stereo audio once again. Thanks to the overwhelming audio and design you'll enjoy stereo music as intended by the artists. The refined acoustic maze (transmission line) in combination with the custom designed filter is music to your ears. Stop listening to music on your boomboxes and 'smart' speakers. Sit back, relax and enjoy the soundstage of these 'Dutch design' eyecatchers. The Uniek Audio speakers are custom made for you and are available from now on.**

### **Innovative and stylish design**

Why should speakers be rectangular? Don't hide your speakers anymore, but make them the eye-catchers of your interior. Four years ago, founder and designer Remy Bakker came up with the idea of developing loudspeakers that you want to show in plain sight. After reactions to large speakers such as "I don't want them in my house" and even, "I immediately had to sell my audio set when we moved in together" he started looking at a shape and format. to develop a loudspeaker that you want to see in your interior. This quickly became a beautiful interplay between design, quality, durability and sound quality. Because for a real audio fanatic, the sound must, of course, be perfect!

### **Real beauty comes from within**

The Uniek Audio speakers are round in shape; something that seemed like a challenge for a long time has turned out to be a blessing to the acoustic maze. Coiled up behind the speakers is the acoustic (transmission line) maze over two floors. This ensures that the speakers have a nice open sound with a lot of detail across the entire spectrum from high to low tones. Partly due to the round shape, the sound is really 'detached' from the speakers. With your eyes closed and a nice stereo song you can't point to the speakers and you find yourself right in front of the band. This ensures very precise instrument placement. To coordinate the interaction between the highs and lows and the transmission line, a custom filter has been developed for this unique combination, which is located outside the maze at the bottom of the loudspeakers. In this way, the filter has the right influence, without getting in the way of the acoustics.

### **'Uniek' in the market**

Where people often try to hide the loudspeakers, we place them in plain sight. And you have to because you want to see these beauties. But also for the sound it is important that the speakers are well positioned. This is therefore 100% taken into account in the design. After a long day of work, sit down with a good record and really relax. Fortunately, we notice that this need is growing again. Just stream your favorite music or play some records with friends and be overwhelmed how beautifully the music fills your room.

Outside the speakers, the amplifier, streamer or your DAC play a major role in the sound reproduction. Fortunately, we help you along with that. At [uniekaudio.nl](https://uniekaudio.nl) you will find advice about the combinations and we even offer a number of complete sets so that you know exactly where you stand.

### **Always a perfect fit for your interior**

The speakers are available in leather with Maple fronts. There is a choice of leathercolors, Cognac, Army, Olive and Anthracite. You can combine this with a black or copper-plated base. If you are really a vintage lover, the exclusive Walnut design set has recently become available, which comes out beautifully on both copper and black.

### **Heard enough? Time to listen**

Keep an eye on our social media channels, because Uniek Audio continues to develop and share its passion with you.
